#### **INTRODUCTION**

- 1. This document describes the methodological guidelines that the Secretariat intends to follow for the implementation of the HS 2012 transposition. The procedural and the general technical aspects of this project were adopted by the General Council Decision of 30 November 2011 (hereafter the "HS 2012 Decision")¹. Under this project, the Secretariat will assist developing country Members in preparing their submissions for the HS 2012 transposition exercise and verify the submissions provided by developed country Members and developing country Members that have prepared their own submissions.
- 2. This document provides a detailed description of the methodology that the Secretariat will follow in the HS 2012 transposition exercise, which is identical to the one used for the HS 2007 transposition. It builds on the experience gained from previous transpositions and includes measures proposed to improve the efficiency and quality of the work, including several simplifications of the transposition process and a standard procedure for verifying Members' submissions.
- 3. This document is organized in seven sections. Section 1 provides an overview of the HS 2012 amendments and a categorization of those changes. The manner in which these changes will be introduced into the WTO Schedules of concessions is further elaborated in Section 2 with detailed examples. Section 3 describes the general methodology that the Secretariat will follow in the transposition. Section 4 discusses some methodological issues that were identified in the context of the HS 2002 and HS 2007 transpositions, and concludes that certain simplifications that are in line with the general mandate might be required in order to avoid unnecessary complexity in the resulting HS 2012 schedules, as well to preserve a better link to the Members' applied nomenclatures. Section 5 follows by describing the proposed simplifications. Section 6 presents the format of the transposition file, and Section 7 describes the general procedure that will be followed by the Secretariat for verifying Members' submissions. Lastly, the Annex presents the complete HS 2012 to 2007 correlation table, including comments outlining possible simplifications.

#### 1 DESCRIPTION OF HS 2012 CHANGES

- 1.1. The Harmonized System 2012 is the fifth major amendment of the HS since its entry into force in 1988. The 2012 revision contains 220 sets of amendments, which results in an increase of the overall number of HS subheadings from 5,052 to 5,205. The Contracting Parties to the HS Convention made these amendments in order to better reflect changes in trade patterns, technological progress, social and environmental needs, and other textual amendments and structural simplifications.
- 1.2. Depending on the impact of the amendments on the product coverage of one or more related subheadings, these amendments can be classified as:
  - (a) clarifying changes, which do not alter the scope of the HS subheadings concerned, and
  - (b) *structural changes*, which relate to changes that alter the product coverage of one or more HS subheadings.
- 1.3. Over a third of the HS 2012 amendments are <u>clarifying changes</u>, which normally take the form of a revision of Section/Chapter/subheading notes or description of subheadings, or a correction of typographical errors. The implementation of clarifying changes is straightforward and can be transposed by a computer program that simply replaces the old texts with the new texts as specified in the HS 2012 amendment.
- 1.4. Thus the transposition work will mainly focus on the remaining <u>structural changes</u>, which normally create or delete HS subheadings, or change the codes or descriptions of HS subheadings. In some cases structural changes could also include a revision of Section/Chapter or subheading notes, which leads to a change of product coverage in one or several of its HS subheadings.
- 1.5. The structural changes of HS 2012 are defined by 617 pairs of correlations in the concordance table that have been published by the Secretariat of the World Customs Organization

<sup>&</sup>lt;sup>1</sup> WT/L/831.

(WCO)<sup>2</sup>. Of these, 305 HS 2007 subheadings are affected by the HS 2012 transposition, of which 175 do not exist anymore in the newer version, while 130 6-digit codes were reused but the product scope was modified. Some 329 new subheadings were created in HS 2012. Depending on the relationships between HS 2007 and HS 2012 subheadings, as well as the complexity of the changes, the correlations can be categorized as:

- (1) one-to-one relationships, where one HS 2007 subheading corresponds exactly to one HS 2012 subheading,
- (2) splitting of one HS 2007 subheading into two or more HS 2012 subheadings,
- (3) merging two or more HS 2007 subheadings into one HS 2012 subheading, or
- (4) more complex cases, involving both splitting and merging of whole or part of different HS 2007 subheadings.

## 1.1 One-to-one relationships

1.6. The extract of the correlation table provided by the WCO below illustrates a one-to-one relationship. The first column on the left lists HS 2012 subheadings whose product scope were changed or have been introduced as new entries. The second column presents the corresponding HS 2007 codes, which may contain an "ex" prefix to indicate that the corresponding HS 2012 entry contains only part of the referenced subheading. Remarks by the WCO are shown in the third column and briefly specify the explanation of the change.

Table 1: Example of a one-to-one relationship

2012 version	2007 version	Remarks in WCO's concordance table
2008.93	ex2008.99	Creation of new subheading 2008.93 for cranberries.
2008.97	2008.92	Subheading 2008.92 has been renumbered as 2008.97.
2008.99	ex2008.99	

HS 2012	Product description		HS 2007	Product description
	- Other, including mixtures other			<ul> <li>Other, including mixtures other</li> </ul>
	than those of subheading 2008.19:			than those of subheading 2008.19:
2008.91	Palm hearts		2008.91	Palm hearts
2008.93	Cranberries (Vaccinium)	<b>.</b>		
2008.97	Mixtures	<b>◆</b> ` ` ` ` `	2008.92	Mixtures
2008.99	Other	<b>◆</b> `-`-	2008.99	Other

- 1.7. In this case, HS 2012 Subheading 2008.97 originates from only one HS 2007 subheading, which is not prefixed, and is entirely transferred to only one HS 2012 subheading. This is a one-to-one relationship where the product coverage of HS 2012 subheading 2008.97 is exactly the same as HS 2007 subheading 2008.92; i.e. a simple renumbering of the subheading is done.
- 1.8. Note that part of (ex) HS 2007 subheading 2008.99 (other) is assigned to HS 2012 subheading 2008.93 (cranberries) and the remaining part (ex) that is retained in code 2008.99 is redefined in the HS 2012 version. To make it clear that only "part of" a subheading is assigned to another subheading, the HS 2007 subheading is prefixed by "ex". Although HS 2012 subheading 2008.93 originates from only one HS 2007 subheading, this is not a one-to-one relationship since the corresponding HS 2007 subheading is split into more than one HS 2012 subheading.

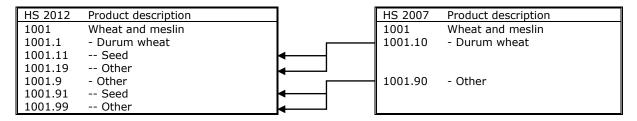

#### 1.2 Split

1.9. A split takes place when the products covered by one subheading are divided into at least two new or reused subheadings; this can be seen as a one-to-many relationship. In the example below, HS 2012 subheadings 1001.11 and 1001.19 are derived from HS 2007 subheading 1001.10 which was split to differentiate between seeds and other; the HS 2007 code is deleted as a subheading and, in this case, becomes an explanatory entry (header) in HS 2012.

<sup>&</sup>lt;sup>2</sup> See G/MA/W/105. A correlation is a pair of codes in the correlation table which defines the relationship between subheadings in the two versions of the nomenclature. The WCO issued two corrigenda (March and July 2011); G/MA/W/105 does not include the July corrigendum (HS 2012 1001.99 and 3913.90).

Table 2: Example of a split2012 version

2012 version	2007 version	Remarks in WCO's concordance table
1001.11	ex1001.10	Subheadings 1001.10 and 1001.90 have been subdivided to provide
1001.19	ex1001.10	separately for seeds of durum wheat and other wheat and meslin
1001.91	ex1001.90	
1001.99	ex1001.90	

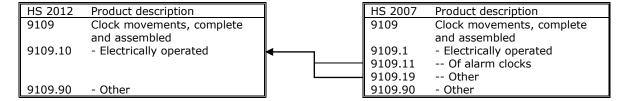

#### 1.3 Merger

1.10. Mergers usually result from simplifications where the distinction of products is no longer maintained in the new nomenclature; in general this is due to the low volume of trade in one or more of the concerned subheadings. Since several subheadings are merged into one, it may be seen as a many-to-one relationship.

Table 3: Example of a merge

2012 version	2007 version	Remarks in WCO's concordance table
9109.10	9109.11	Subheadings 9109.11 and 9109.19 have been merged into new subheading
	9109.19	9109.10 because of the low volume of trade

## 1.4 Complex cases

1.11. A complex case is a many-to-many relationship where both splitting and merging of whole or part of different HS 2007 subheadings into several HS 2012 subheadings occurs at the same time.

Table 4: Example of a complex case

2012 version	2007 version	Remarks in WCO's concordance table
0101.21	ex0101.10	Subdivision of subheading 0101.10 to provide separately for horses and
0101.29	ex0101.90	asses.
0101.30	ex0101.10	A
	ex0101.90	Amendment adopted as a result of the FAO proposal to enhance the monitoring of the good global security.
0101.90	ex0101.90	Thomsoning of the good global security.

HS 2012	Product description		HS 2007	Product description
0101	Live horses, asses, mules and hinnies.		0101	Live horses, asses, mules and hinnies.
0101.2	- Horses :			
0101.21	Pure-bred breeding animals	<b>4</b>	0101.10	<ul> <li>Pure-bred breeding animals</li> </ul>
0101.29	Other	<del>-  </del>	0101.90	- Other
0101.30	- Asses	<b>4</b>		
0101.90	- Other			

1.12. In this case, HS 2007 subheading 0101.10 is split into two HS 2012 subheadings and HS 2007 subheading 0101.90 is split into three HS 2012 subheadings. At the same time, both part of 0101.10 and part of 0101.90 are merged into HS 2012 subheading 0101.30.

#### **2 INTRODUCING HS 2012 CHANGES IN WTO SCHEDULES**

- 2.1. When introducing HS changes into WTO schedules of concessions, paragraph 4 of the HS 2012 Decision provides the guiding principle to be observed in the transposition exercise: to the extent possible, the existing concessions (e.g. bound duties, ODCs, INRs, etc.) should be maintained unchanged. In other words, the scope of the concessions should remain unaltered in both versions of the nomenclature. Any ambiguity in the scope that could result from the introduction of an HS amendment should normally be addressed through the introduction of (new) national tariff line breakouts based on the previous version of the HS.
- 2.2. The types of changes discussed in section I above constitute a framework that facilitates the tracking of modifications from HS 2007 into HS 2012 and facilitate the understanding of the explanations by the WCO. One way of doing this is to look first at the HS 2007 subheading and then focus on the relevant HS 2012 subheading(s) where the specific product should be allocated. An alternative approach is to start with the HS 2012 subheading and then search for the relevant HS 2007 subheading(s) that they originate from.
- 2.3. In case a Member has a ceiling binding of 20 per cent for agricultural products and 10 per cent for non-agricultural product, the transposition of the Member's commitments would be relatively straight forward. It would only be necessary to classify the HS 2012 subheadings in agricultural and non-agricultural products and then reflect the concessions according to these two sectors. It would not be necessary to have a detailed description of where an HS 2007 subheading goes in the 2012 nomenclature.
- 2.4. In the approach proposed by the Secretariat, the transposition of Members' commitments starts with the standard HS 2012 nomenclature, which is then linked to the corresponding national tariff lines in HS 2007 via the WCO's 6-digit correlation table. The specific concessions are identified and, where relevant, breakouts are created whenever the concessions within a particular subheading are different. A correlation table describing how the HS 2012 tariff lines are linked to the national HS 2007 lines is also produced for transparency.
- 2.5. In the example below, HS 2012 Subheading 1001.19 originates from HS 2007 subheading 1001.10 (see Table 2 above), which is broken down into three national tariff lines. These three national tariff lines are called "candidate lines". In the WCO correlation table, the HS 2007 subheading is prefixed with an "ex" to indicate that HS 2012 subheading 1001.19 originates from only part of the products covered by HS 2007 subheading 1001.10. To identify which of the three national tariff lines should be assigned to the HS 2012 subheading, a comparison of the product scope in both versions of the HS needs to be undertaken on a case-by-case basis; i.e. a manual correlation as opposed to automatic has to be carried out.<sup>3</sup>

<sup>&</sup>lt;sup>3</sup> It may also happen that only parts of national tariff lines are relevant for the new HS 2012 subheading.

Case 1.a: All candidate lines with identical level of commitments

HS 2012	Product description	HS 2007	Product description	Duty	INR
1001.1	- Durum wheat	1001.10	- Durum wheat		
1001.11	Seed	1001.1010	For animal feed	5	Α
		1001.1020	For sowing	5	Α
		1001.1090	Other	5	Α
1001.19	Other	1001.1010	For animal feed	5	Α
		1001.1020	For sowing	5	Α
		1001.1090	Other	5	Α

2.6. The comparison of product descriptions in both versions shows that HS 2012 subheading 1001.19 originates from two national tariff lines (1001.1010 and 1001.1090), which means that the remaining third candidate line should be discarded. However, in this specific situation, the commitments contained on each of the national tariff lines are identical for all three candidate lines. Consequently, whether only two or all candidate lines are retained, the duty level that would correspond for HS 2012 subheading 1001.19 is 5 per cent with an INR for Member "A". Hence, whenever the concessions are identical for all candidate lines the exact identification of national tariff lines that have to be retained is not necessary and the transposition can be done through an automatic program without recurring to a manual transposition. The corresponding correlation that will be created by the program, which is used for tracking purposes, would not be entirely correct for the precise allocation of products between both nomenclatures, but this will have no impact on the Member's commitments in the new version of the HS.

Case 1.b: All candidate lines with identical level of commitments, transposition to HS 2012

HS 2012		Duty	INR	HS 2007		Duty	INR
1001.1	- Durum wheat			1001.10	- Durum wheat		
1001.1100	Seed	5	Α	1001.1010	For animal feed	5	Α
				1001.1020	For sowing	5	Α
				1001.1090	Other	5	Α
1001.1900	Other	5	Α	1001.1010	For animal feed	5	Α
				1001.1020	For sowing	5	Α
				1001.1090	Other	5	Α

2.7. The situation is different when the concessions for the candidate lines within a subheading are different; candidate lines for deletion have to be identified and breakouts in HS 2012 have to be created to reflect the different levels of such concessions.

Case 1.c: Candidate lines with different level of commitments

HS 2012		Duty	INR	HS 2007		Duty	INR
1001.1	- Durum wheat			1001.10	- Durum wheat		
				<del>1001.1010</del>	— For animal feed	5	Α
1001.1100	Seed	5	Α	1001.1020	For sowing	5	Α
				<del>1001.1090</del>	<del>- Other</del>	4	Α
1001.19	Other						
1001.1910	For animal feed	5	Α	1001.1010	For animal feed	5	Α
				<del>1001.1020</del>	For sowing	5	Α
1001.1990	Other	4	Α	1001.1090	Other	4	Α

Case 2: The case of a one-to-one relationship was introduced in Table 1. An HS 2007 subheading was entirely transferred to a single HS 2012 subheading and the latter originates from only one HS 2007 subheading. This means that there is no change in the product scope for these subheadings and a simple renumbering is done. This change can be introduced in a schedule of concessions by substituting the HS 2007 code with the new HS 2012 code. If there are national breakouts under the affected subheadings, the first six digits of the national codes are replaced.

Case 2: One-to-one relationship

HS 2012	Product description	Duty	INR	HS 2007	Product description	Duty	INR
2008.9 <b>7</b>	Mixtures			2008.9 <b>2</b>	Mixtures		
2008.9 <b>7</b> 1	with added spirit			2008.9 <b>2</b> 1	with added spirit		
2008.9 <b>7</b> 11	Tropical fruit	5	Α	2008.9 <b>2</b> 11	Tropical fruit	5	Α
2008.9 <b>7</b> 19	Other	0	В	2008.9 <b>2</b> 19	Other	0	В
2008.9 <b>7</b> 90	Other	5	С	2008.9 <b>2</b> 90	Other	5	С

Case 3: In this case multiple HS 2007 subheadings are entirely merged into a single HS 2012 subheading (none of the HS 2007 are prefixed), i.e. all the products covered by the HS 2007 subheadings are fully transferred to one, and only one, HS 2012 subheading.

2.8. The example below shows that two HS 2007 subheadings are transferred to HS 2012 subheading 9109.10 where they need to be recorded in terms of HS 2012 codes (see Table 3 for the 6-digit correlation). National headers (7-digit codes) corresponding to each one of the HS 2007 subheading are first introduced under the HS 2012 subheading and the national tariff lines are listed under each national header. Thus, there is no need to create national breakouts by comparing product scope in each version of the HS.

Case 3.a: The entirety of HS 2007 subheadings are transferred to a single HS 2012 subheading

HS2012	Product description	HS 2007		Duty	INR
9109	Clock movements, complete and assembled	9109	Clock movements, complete and assembled		
9109.10	<ul> <li>Electrically operated</li> </ul>	9109.1	- Electrically operated		
		9109.11	Of alarm clocks	5	Α
		9109.1110	With opto-electronic display		
		9109.1190	Other	0	В
		9109.19	Other		
		9109.191	Of a width < 50 mm		
		9109.1911	For use in civil aircraft	5	В
		9109.1919	Other	0	С
		9109.1990	Other	5	В

Case 3.b: The entirety of HS 2007 subheadings are transferred to a single HS 2012 subheading, transposition to HS 2012

HS2012	Product description	Duty	INR	HS 2007	Duty	INR
9109	Clock movements, complete and assembled			9109		
9109.10	- Electrically operated			9109.1		
9109.101	Of alarm clocks			9109.11		
9109.10110	With opto-electronic display	5	Α	9109.1110	5	Α
9109.10190	Other	0	В	9109.1190	0	В
9109.109	Other			9109.19		
9109.1091	Of a width < 50 mm			9109.191		
9109.10911	For use in civil aircraft	5	В	9109.1911	5	В
9109.10919	Other	0	С	9109.1919	0	С
9109.10990	Other	5	В	9109.1990	5	В

Case 4: A slight variation of case 3 where automatic transposition could also be used is when the concessions are identical at the level of each of the HS 2007 subheadings, and one or more of the HS 2007 subheadings are prefixed with "ex". Consider HS 2012 subheading 8456.90 which originates from a full HS 2007 subheading (8456.90) and part of 8479.89.

Case 4.a: Identical level of commitments for each of the HS 2007 subheadings

2012 version	2007 version	Remarks in WCO's concordance table		
8456.90	8456.90 ex8479.89	The scope of heading 84.56 was expanded to cover also water-jet cutting machines.		

HS2012	Product description	HS 2007	Product description	Duty	INR
8456.90	- Other	8479.89	Other		
		8479.8910	Air purifiers	0	В
		8479.8920	Machines for plating by dipping	0	В
		8479.8930	Machines for glazing ceramics	0	В
		8479.8990	Other	0	В
		8456.90	- Other		
		8456.9010	Numerically controlled	5	Α
		8456.9090	Other	5	Α

2.9. In the example above, HS 2007 subheading 8479.89 consists of 4 national tariff lines. To reflect the level of commitment in HS 2012, the national tariff line(s) where "water-jet cutting machines" are classified within 8479.89 has (have) to be identified. HS2007 Subheading 8479.89 if prefixed in the correlation table and only part of this subheading should be transferred to HS2012 subheading 8456.90. The commitments are identical within each subheading, which means that an analysis of the product scope in HS 2007 is not necessary to correctly reflect the concessions in HS 2012 as shown in the table below.

Case 4.b: Identical level of concessions for each of the HS 2007 subheadings, transposition to HS 2012

HS2012	Product description	Duty	INR	HS 2007	Duty	INR
8456.90	- Other			8479.89		
8456.9010	Water-jet cutting machines	0	В	8479.8910	0	В
				8479.8920	0	В
				8479.8930	0	В
				8479.8990	0	В
				8456.90		
8456.9090	Other	5	Α	8456.9010	5	Α
				8456.9090	5	Α

2.10. The correlation table that traces the transfer of products from HS 2007 into HS 2012 needs to identify all the national tariff lines in HS 2007 that are possibly concerned. Whether or not all candidate lines are retained will not affect the level of concessions when they are expressed in HS 2012.

#### **3 METHODOLOGY FOR PROCESSING HS 2012 CHANGES**

- 3.1. Paragraph 9 of the HS 2012 Decision mandates the Secretariat to review the submissions prepared by Members. This review will follow a factual report<sup>4</sup> which will include observations on the application of the transposition procedure/methodology. This report will first be submitted to the Members concerned for comments with a view to reaching a common understanding. Any outstanding issue that cannot be resolved will be attached to the "Draft HS 2012 file" and will be circulated for multilateral review.
- 3.2. As provided in paragraph 3 of the HS 2012 Decision, the Secretariat's work shall be based on each Member's latest schedule, as reflected in the CTS. If tariff lines affected by changes in the HS 2012 nomenclature have not yet been certified in the HS 2007 nomenclature, then the "draft HS 2007 files", which have been approved by all other Members in the multilateral review of the HS 2007 transposition, shall be used as the basis for those tariff lines.
- 3.3. The methodology employed by the Secretariat is based on the guiding principle for the transpositions according to which the overall product coverage will not be altered by any HS amendments. Products removed from one subheading have to be reallocated to another subheading(s). Therefore, no matter how the HS subheadings are affected by the change in HS versions, each subheading in the new nomenclature must be composed of one or more subheadings or parts of these subheadings from the old nomenclature.
- 3.4. Based on this principle and the experience gained in the previous two transposition exercises, a uniform processing methodology has been developed. It includes some semi-automatic

<sup>&</sup>lt;sup>4</sup> See Section VII.

procedures in order to standardize and simplify the transposition process. Like in the HS 2002 and HS 2007 transposition exercises, the following three-step procedure will be used by the WTO Secretariat:

- (1) All the HS 2012 subheadings that are related to *structural* changes will be identified. For each of these HS 2012 subheadings, all corresponding HS 2007 subheadings and their related national tariff lines will be identified in the CTS Concession table and allocated to their respective HS 2012 subheadings. The result of this step will be a table listing all HS 2012 subheadings and the corresponding HS 2007 national tariff lines that could potentially be reallocated under these HS 2012 subheadings. A pair of HS 2012 and HS 2007 subheadings should be the same as that in the WCO standard correlation tables. One pair may correspond to more than one national tariff line. And one national tariff line may correspond to more than one pair of HS six-digit correlations or HS 2012 subheadings. All tariff lines corresponding to an HS 2012 subheading are called "candidate lines" for this HS 2012 subheading.
- (2) A computer program will evaluate all candidate lines for each HS 2012 subheading to determine whether they could be simplified by, for example, collapsing them in a single subheading. Specifically, if all candidate lines corresponding to an HS 2012 subheading have identical concessions (if they present the same core parts of the concessions, e.g. bound duty, INRs, ODCs, SSG, etc.), these candidate lines could be simplified by collapsing them into one HS 2012 line. As it is no longer necessary to distinguish between those candidate lines with identical concessions, the different "origins" of these candidate lines could be ignored to simplify the outcome. The HS 2012 subheading code and description would become the new tariff line code and description.<sup>5</sup>
- (3) When the concessions of candidate lines do not fit in any of the four cases listed in Section II above, these HS 2012 subheadings and candidate lines will be put aside for manual transposition. These candidate lines will then be examined on a case-by-case basis to determine whether they should be retained for this HS 2012 subheading or should be removed from this HS 2012 subheading. Since one HS 2007 subheading can be split into more than one HS 2012 subheading, a national tariff line under this HS 2007 subheading could, in theory, be assigned to each corresponding HS 2012 subheading as a candidate line. Depending on the product coverage of this national tariff line, it may be retained or dropped for a specific HS 2012 subheading, but it should appear under at least one HS 2012 subheading. For all candidate lines that are kept, tariff line codes and descriptions may need to be re-defined accordingly based on the national product descriptions. These new codes and descriptions become part of the new CTS in HS 2012 and the pairs of tariff line codes in HS 2007 and HS 2012 are recorded in the correlation table.
- 3.5. Although a large number of lines could be automatically transposed through a computer program, and this process will significantly reduce the workload and help focus the resources on the manual work, it should be noted that the manual work involved would still be extensive and will require a considerable resources from the WTO Secretariat.
- 3.6. The following chart illustrates how this process is applied for processing two HS changes of a mock schedule with four national tariff lines. The first change related to subheading 9109.10 is processed automatically since the two national tariff lines have the same duties. The second change on subheadings 2008.93 and 2008.99 involves different duties for candidate lines. It has to be processed manually to take into account the national descriptions and duty rates.

<sup>&</sup>lt;sup>5</sup> Zeros ("0"s) may be added to make the code the same length as other national tariff line codes.

WCO Correlation Table Schedule of concessions in HS 2007 HS 2012 HS 2007 TL Code in HS Description Duty 2007 National 9109.10 9109.11 9109.1100 50% Description A National 9109.19 9109.1900 Description B 50% HS 2012 HS 2007 TL Code in HS Description Duty 2007 National 2008.93 ex2008.99 2008.99.10 Description C 10% National 2008.99 ex2008.99 2008.99.90 Description D 20%

Figure 5: Example of transposition procedures

•	`	▼	<b>\</b>						
Candidate	e lines for HS 20	012 subhea	dings				New Sched	ule in HS 2012	2
HS 2012	HS 2012	HS 2007	HS 2007	Description			TL code in HS 2012	Description	
9109.10	Standard Description 1	9109.11	9109.1100	National Description A	50%	Step 2	9109.10	Standard Description 1	50%
9109.10	Standard Description 1	9109.19	9109.1900	National Description B	50%	Collaps ed			
2008.93 *	Standard Description 2	<del>2008.93</del>	2008.9910	National Description	<del>10%</del>				
2008.93	Standard Description 2	2008.93	2008.9990	National Description D	20%	Step 3	2008.9300	Standard Description 2	20%
2008.99	Standard Description 3	2008.99	2008.9910	National Description C	10%	Manual	2008.9910	National Description C	10%
2008.99	Standard Description 3	2008.99	2008.9990	National Description D	20%		2008.9990	National Description D	20%

<sup>\*</sup> It is assumed that as a candidate, HS 2007 national tariff line 2008.9910 is not relevant to HS 2012 subheading 2008.93. Therefore, it was dropped for 2008.93, but retained for 2008.99.

## **4 THE NEED FOR SIMPLIFICATION**

- 4.1. The general aim of the HS amendments is to better align the international classification standard to the changing requirements of the international trading system, keeping it simple, relevant, and comprehensible. This sometimes requires substantial regroupings of parts of headings or subheadings to other or newly defined subheadings. Reflecting such changes in the WTO schedules of concessions is often difficult due to the large number of "legal legacies" that need to be preserved in order to retain unaltered the different concessions. From the WTO perspective, one of the main reasons for transposing Members' Schedules of concessions is to allow for a comparison of the bound duties reflected in the Schedules of concessions vis-à-vis the applied duties (i.e. to ensure that concessions are not being breached).
- 4.2. The "HS 2007 transposition methodology<sup>6</sup>" highlighted the need for simplification of a limited number of cases, based on the experience gained in the HS 2002 transposition exercise. Indeed, the Secretariat had previously dedicated a substantial amount of manual work on a handful of subheadings with complex coding structure and very complicated technical descriptions. While the

 $<sup>^6</sup>$  G/MA/283, Transposition of Members' CTS files to the HS 2007 nomenclature, notes on the methodology", adopted on 26 April 2012.

- "2002 methodology"<sup>7</sup> was technically correct, a disproportionately large amount of resources were required and had the disadvantage of resulting in a complicated nomenclature structure that was very difficult to align to the nomenclature of the applied tariff used by Members in practice. In addition, some of the theoretical breakdowns might be virtually empty, with no traded products actually being classified under them.
- 4.3. While the previous transposition procedures have stressed the principle of not affecting the scope of the concessions to the extent possible, they have also acknowledged the practical importance of achieving some degree of simplification in case of complex cases. Several simplification methods were provided for in the earlier HS transpositions procedures in respect of the bound duties<sup>8</sup>, and are described in paragraph 5 of Annex 2 of the HS 2012 decision. For instance, when two tariff lines with different duties were combined, the duty corresponding to the tariff line with majority trade, or the simple or trade weighted average could be assigned as a single duty to a new tariff line, which otherwise would need to be split in two in correspondence with the two different duties.<sup>9</sup>
- 4.4. Although the decision does not mention methodologies that could be used to deal with other types of simplifications, similar practical steps could be taken to simplify the transposition work when the same bound duty is involved.

#### **5 PROPOSED STEPS TO SIMPLIFY THE HS 2012 TRANSPOSITION**

5.1. In light of the previous section and the lessons learned from the former transposition exercises, the Secretariat proposes to maintain the practical solutions that aim at keeping the structure of Members' Schedules of concessions simple, while preserving their rights and obligations. The use of any of these methods, which have already been formally approved by the Committee for the HS 2007 transposition, will be duly flagged and noted in the transposition files for transparency.

## 5.1 INRs and legal instruments

5.2. The HS 2002 transposition took into account all INRs (present and earlier) and the reference to the legal instruments (present and first). When two HS subheadings were merged and the tariff lines under them had different INRs or instruments, new breakouts were created to embody the different INRs or instruments, even though all other elements of the concessions, e.g. bound duties and ODCs, were exactly the same. For example:

2012 version	2007 version	Remarks in WCO's concordance table
3808.50	3808.50 ex3808.91 ex3808.92 ex3808.93 ex3808.94 ex3808.99	The scope of subheading 3808.50 has been expanded to cover the products listed in the new subheading Note 1 to Chapter 38. Amendments made consequential to the Rotterdam Convention on the prior informed consent procedure (PIC) for certain hazardous chemicals and pesticides in international trade

HS2012	Product description	HS 2007		Duty	INR
3808.50	- Goods specified in	3808.5000	- Goods specified in Subheading Note 1 to	0	В
	Subheading Note 1 to		this Chapter		
	this Chapter	3808.91	Insecticides		
		3808.9110	Containing inorganic substances	0	Α
		3808.9190	Other	0	В
		3808.92	Fungicides		
		3808.9210	Maneb; zineb; mancozeb	0	Α
		3808.9290	Other	0	В
		3808.93	Herbicides,		

<sup>&</sup>lt;sup>7</sup> WT/L/605.

<sup>8</sup> BISD 30S/17, WT/L/407.

<sup>&</sup>lt;sup>9</sup> This has proven difficult to implement in cases where: 1) non-ad valorem duties are involved and no *ad valorem* equivalents are available; 2) only part of a tariff line is transferred and trade statistics are only available at a more aggregated level (so it is difficult to determine which component has the majority of trade or to calculate weighted averages). In addition, since individual Members can use these measures differently, the application of one method and not the other may cause opposition when other Members' interests are impaired and the transposition process may be blocked.

HS2012	Product description	HS 2007		Duty	INR
		3808.9310	Plant-growth regulators	0	A,B
		3808.9390	Other	0	В
		3808.94	Disinfectants		
		3808.9410	Based on quatermay ammonium salts	0	
		3808.9490	Other	0	
		3808.9900	Other	0	Α

- 5.3. Although the duty for all tariff lines under HS2012 subheading 3805.50 is zero, several breakouts would still have to be created just for purpose of differentiating the products corresponding to different INRs. Not only is it difficult to determine the appropriate descriptions for those breakouts, because they relate to many chemical terminologies both at the level of the national tariff lines and in the chapter notes, but they also result in breakouts that have no relationship with the breakouts of Members' applied tariff line structure.
- 5.4. Since INRs are normally attached to a duty level, it could be reasonable to simplify those entries of INRs that relate to the same duty, keeping just one entry. The Secretariat has previously adopted an approach that avoids the creation of new breakouts solely for differentiating INRs (present and earlier) and legal instruments (present and first) in the HS 2007 transposition. The "candidates" with the same duty but different INRs were collapsed into one tariff line. For Members holding INRs for only part of the tariff line, an ex-out was added in front of country codes. In the case of the above subheading the tariff line would read as shown in Table 4 below.

**Table 5: Example of different INRs** 

HS Code	Description	Bound Duty	Present INR Text
3808.5000	- Goods specified in Subheading Note 1 to this Chapter	0	exA, exB

5.5. Similarly, the "candidate lines" with the same duty but different present or earlier instruments will also be collapsed into one tariff line. Any document symbol related to this tariff line, fully or partially, will be listed together in the instrument fields.

# 5.2 Take into consideration Members' transpositions in their applied tariffs

5.6. For the tariff lines that were affected by HS 2012 changes, assuming data availability and to the extent that this helps in resolving complex correlations, the Secretariat will take into consideration the transpositions that have been done by Members in their applied tariffs. This would be particularly useful in the case of correlations where the WCO could not achieve a consensus among the Contracting Parties to the HS¹0. If the Secretariat determines that a Member took a simplified approach in the transposition of that Member's applied tariffs, the Secretariat would try to adopt the same approach as long as it would be in line with the guiding principles of the transposition. Similarly, for Members belonging to a customs union or using the same nomenclature, the Secretariat will endeavour to treat their transpositions in a similar manner. However, tariff lines that have not been affected by HS 2012 changes will not be aligned to the applied tariff by the Secretariat.

# **5.3 Simplified correlations**

5.7. The WCO correlation table circulated in document  $G/MA/W/105^{11}$  is the main basis for the Secretariat's work. A simplified correlation table could reduce the manual work involved and will ensure consistency in the treatment of files that the Secretariat will process. Based on an analysis of HS 2012 changes, the Secretariat proposes the simplification of some correlations as discussed below and flagged in the Annex. If a Member intends to make use of the standard correlation table or take other approaches, it would need to inform the Secretariat.

<sup>&</sup>lt;sup>10</sup> E.g. HS 2012 Subheadings 4101.20 and 4101.90.

 $<sup>^{11}</sup>$  In March 2011 the WCO issued a first corrigendum regarding HS 2012 subheadings 2925.29 and 3002.10; these were included in G/MA/W/105 issued in May 2011. A second corrigendum (July 2011) relates to HS 2012 subheadings 1001.99 and 3913.90 and have to be reflected in G/MA/W/105.

## (a) Simplifying the changes of subheadings deleted due to low volume of trade

The HS 2012 amendments removed headings with annual World trade below a \$100 million threshold and subheadings with annual trade below \$50 million, unless these need to be maintained for other reasons, such as environmental or social concerns. In order to ensure a correct classification of the products originally falling under the deleted subheadings, the WCO provides a correlation to indicate where these products are reallocated.

In implementing these changes in their applied tariff, Members typically delete these headings and subheadings. The products originally classified under the deleted subheadings will apply the duties of the new subheadings where they are reallocated.

In the HS 2012 amendments, over 60 HS 2007 subheadings have been removed because the trade volume was below the above-mentioned threshold. These subheadings are flagged in the correlation table included in the Annex. For 18 subheadings in the HS 2012 transposition, the Secretariat proposes to apply the rate(s) previously applied to the tariff line(s) with the majority of trade if the low-trade subheadings (or parts thereof) can actually be considered to be of marginal importance thus omitting the correlation for the low-trade subheadings<sup>12</sup>, unless the subheading that was deleted due to low trade appears in the nomenclature of the applied tariff. It should be noted that this approach is expressly provided for in the HS 2012 Decision<sup>13</sup>.

In the example below, the commitments on subheading 1102.10 in HS 2007 will be discarded.

#### Simplification a: Low volume of trade

2012 version	2007 version	Remarks in WCO's concordance table
1102.90	1102.10	Deletion of subheading 1102.10 because of the low
	1102.90	volume of trade.

HS 2012	Product description	Duty	HS 2007	Product description	Duty
1102	Cereal flours other than of		1102	Cereal flours other than	
	wheat or meslin.			of wheat or meslin.	
			1102.1000	- Rye flour	10
1102.2000	<ul> <li>Maize (corn) flour</li> </ul>	5	1102.2000	- Maize (corn) flour	5
1102.9000	- Other	0	1102.9000	- Other	0

However this is not possible in the following case where both HS 2007 subheadings are deleted and merged into a new Subheading in HS2012:

2012 version	2007 version	Remarks in WCO's concordance table
2528.00	2528.10	Subheadings 2528.10 and 2528.90 have been deleted because of the
	2528.90	low volume of trade.

#### (b) Simplifying selected complex changes

<sup>13</sup> WT/L/831, Annex 2, Paragraph 5.

Complex changes account for most of the Secretariat's workload of the HS transposition. In order to precisely maintain minor differences among newly created breakouts, complicated structures and arcane descriptions have to be employed. Although these are technically correct, they are not aligned to the national tariff, which can cause problems in the use of these schedules in the future. Research done by the Secretariat suggests that it is possible to simplify some of these cases, by considering the patterns of trade and the reason behind the HS change. Three such situations are described below.

**Simplification 1**: In the HS 2012 amendments, the scope of 28.52 was expanded by inserting the expression "whether or not chemically defined" to compounds of organic or inorganic mercury. This change was introduced in response to the international convention

<sup>&</sup>lt;sup>12</sup> When the national applied nomenclature has been submitted to the Integrated Data Base, the Secretariat will verify [1] whether the deleted subheading appears in the nomenclature of the latest available HS 2012 applied tariff and [2] whether the applied rate is higher than the bound commitment of the subheading with a larger share of trade. If this is the case, then the simplification is not implemented.

for facilitating the monitoring and control of these products under the Rotterdam Convention on the prior informed consent procedure (PIC) for certain hazardous chemicals and pesticides in international trade. Non-chemically defined mercury compounds originally classified under a dozen of HS 2007 subheadings were transferred to the new HS 2012 subheading 2852.90<sup>14</sup>; eight of the HS 2007 subheadings end with "90" or "9" meaning that they are residual subheadings of the heading. When the national HS 2007 subheadings are more detailed than 6-digit, it is not a straightforward exercise to identify the products that could contain non-chemically defined mercury compounds. This newly created subheading groups all the compounds based on the sole content of non-chemically defined mercury. Therefore, it might not be necessary to overcomplicate this subheading with new breakouts according to the other elements contained in these compounds and, hence, avoid the introduction of complicated codes and product descriptions that will not exist in the national tariff. In this particular case, it would seem appropriate to keep only one line and omit the details.

The key question for the transposition would be which duty should be recorded for this new tariff line in HS 2012. Since most Members did not have national breakouts specifically for not chemically defined mercury compounds under those 12 HS 2007 subheadings, trade statistics are normally not available. In this case, the  $mode^{15}$  of the duties of all the HS 2007 tariff lines could be used to arrive at the duty of the new subheading. Candidate lines that are not bound are discarded from the calculation of the  $mode^{16}$ . HS 2012 subheading 2852.90 will be fully unbound only if all the candidate lines are unbound.

### Simplification b.1a: HS 2012 subheading 2852.90

2012 version	2007 version	Remarks in WCO's concordance table
2852.10	2852.00	The scope of heading 28.52 has been expanded by inserting the expression "whether or not chemically defined". Subsequently
2852.90	ex2830.90 ex2835.39 ex2842.10 ex2848.00 ex2849.90 ex2850.00 ex2934.99 ex3201.90 ex3501.90 ex3502.90 ex3504.00 ex3824.90	heading 28.52 has been divided to cover, under the new subheading 2852.10, chemically defined inorganic or organic compounds of mercury, excluding amalgams (facilitating the monitoring and control of these products under the Rotterdam Convention on the prior informed consent procedure (PIC) for certain hazardous chemicals and pesticides in international trade) and, under the new subheading 2852.90, other inorganic or organic compounds of mercury, excluding amalgams. For the purposes of subheading 2852.10, the expression "chemically defined" has been defined in Subheading Note 1 to Chapter 28. Expansion of the scope of heading 28.52 entails the transfer of non-chemically defined compounds of mercury to the new subheading 2852.90.

Out of the 110 Members' CTS files in HS 2007, none has a national tariff line under the 12 HS 2007 subheadings listed in the correlation table above with a product description relating to "non-chemically defined compounds of mercury". Consequently, all national tariff lines under the subheadings in HS 2007 will remain fully listed in HS 2012 for 10 of these 12 subheadings<sup>17</sup>. Although the product scope is reduced from HS 2007 to HS 2012, these can be seen as a special case of one-to-one relationship as shown in the example below.

## Simplification b.1b: HS 2007 subheadings linked to HS 2012 2852.90

2012 version	2007 version	Remarks in WCO's concordance table
2830.90	ex2830.90	Non-chemically defined compounds of mercury have been
		transferred to new subheading 2852.90.

<sup>&</sup>lt;sup>14</sup> World imports (UNSD-Comtrade database) decreased from USD 108 million in 2012 to USD 80 million in 2015; out of 110 Members (EU 28 counted as one) where tariff data is available in the Integrated Data Base, 97 countries have a single level of duty for subheading 285290.

 $<sup>^{15}</sup>$  In the context of the HS2007 transposition, the Secretariat suggested to use the duty rate with the most frequent occurrence (i.e. the mode) for special cases (c.f. JOB/MA/108). The use of the mode instead of the arithmetic average was proposed to avoid creating new levels of duties, specifically for those countries operating with a limited number of duty levels.

<sup>&</sup>lt;sup>16</sup> In case the percentage of unbound candidate lines exceeds 60 per cent, then a manual transposition

will be carried out and no simplification done.

17 Subheadings HS 2007 2934.99 and 3824.90 are also affected by changes other than the expansion of the scope of heading 2852.

HS2012		Duty	INR	HS 2007		Duty	INR
2830	Sulphides; polysulphides, whether or not chemically defined.			2830	Sulphides; polysulphides, whether or not chemically defined.		
2830.1000	,	0		2830.1000	- Sodium sulphide	0	
2830.90	- Other			2830.90	- Other		
2830.9010	Potassium sulphide	0	Α	2830.9010	Potassium sulphide	0	Α
2830.9020	Zinc sulphide	5	В	2830.9020	Zinc sulphide	5	В
2830.9030	Cadmium sulphide	0	A,B	2830.9030	Cadmium sulphide	0	A,B
2830.9090	Other	3	Α	2830.9090	Other	3	Α

**Simplification 2**: The scope of HS 2007 subheading 3002.10 (Antisera and other blood fractions and modified immunological products, whether or not obtained by means of biotechnological processes) was expanded to cover other immunological products which are directly involved in the regulation of immunological processes.

# Simplification b.2: HS 2012 subheading 3002.10

2012 version	2007 version	Remarks in WCO's concordance table
3002.10	ex2925.29 ex2933.29	The scope of subheading 3002.10 has been expanded to cover other immunological products which are directly involved in the
	ex2934.99	regulation of immunological processes.
	ex2937.90	
	ex3002.10 ex3002.20	
	ex3002.20 ex3002.90	
	ex3907.20	

HS2012	Product description	HS 2007	Product description
3002	Human blood; animal blood prepared for therapeutic, prophylactic or diagnostic uses; antisera, other blood fractions and immunological products, whether or not modified or obtained by means of biotechnological processes; vaccines, toxins, cultures of micro-organisms (excluding yeasts) and similar products	3002	Human blood; animal blood prepared for therapeutic, prophylactic or diagnostic uses; antisera and other blood fractions and <b>modified immunological products</b> , whether or not obtained by means of biotechnological processes; vaccines, toxins, cultures of microorganisms (excluding yeasts) and similar products.
300210	- Antisera, other blood fractions and immunological products, <b>whether or not</b> <b>modified</b> or obtained by means of biotechnological processes	300210	- Antisera and other blood fractions and <b>modified</b> immunological products, whether or not obtained by means of biotechnological processes
300220	- Vaccines for human medicine	300220	- Vaccines for human medicine
300230	<ul> <li>Vaccines for veterinary medicine</li> </ul>	300230	- Vaccines for veterinary medicine
300290	- Other	300290	- Other

Five of eight HS 2007 subheadings are residual subheadings (ending with 90 or 9). Like in the previous case, it would seem appropriate to have only one tariff line without a further breakout. The mode of the candidate lines would be retained as the level of binding.

**Simplification 3**: Heading 96.19 was created for sanitary towels (pads) and tampons, napkins and napkin.

<b>Simplification</b>	b.3: H	S 2012	subheading	9619.00
-----------------------	--------	--------	------------	---------

2012 version	2007 version		Remarks in WCO's concordance table
9619.00	ex392620, ex39	92690	Creation of new heading 96.19 for sanitary towels
	481840		(pads) and tampons, napkins and napkin liners for
	560110		babies and similar articles, of any material
	ex610821,	ex610822,	
	ex610829		
	ex611120,	ex611130,	
	ex611190		
	ex611300		
	ex620891,	ex620892,	
	ex620899		
	ex620920,	ex620930,	
	ex620990,		
	ex621050,		
	ex630790		

Subheading 9619.00 originates from 19 HS 2007 subheadings and was previously classified according to their constituent material  $^{18}$ . HS 2007 subheadings 4818.40 and 5601.10 should be fully retained as these subheadings are entirely merged in the newly created heading. Regarding the remaining 17 subheadings, it is proposed to retain the mode so as not to unnecessarily overcomplicate the nomenclature.

Simplification b.3: HS 2012 subheading 9619.00, transposition to HS 2012

HS2012	Product description	Duty	INR	HS 2007	Duty	INR
9619.00						
9619.001	- Of paper pulp, paper, cellulose wadding or webs of cellulose fibre			4818.40		
9619.0011	description of HS 2007 4848.4010	0	Α	4818.4010	0	Α
9619.0019	Other	5	В	4818.4090	5	В

## Other issues related to the Secretariat's transposition

## 5.4 Correlations without clear codes

5.8. HS Contracting Parties were not able to reach consensus for one HS 2012 amendment. Assuming data availability, the Secretariat will take into consideration the transpositions which

<sup>&</sup>lt;sup>18</sup> This amendment translates the technological change behind these products that have evolved from simple knit or woven cloth to cellulosic-wood-pulp-based products and super absorbent polymers combined with plastic films and textile nonwovens. Absorbent technology continues to evolve, with various materials from different HS chapters and subheadings being combined into composite products.

have been done by Members in their applied tariffs. In case this information is not available or, if it does not help in resolving the issue, the Secretariat will adopt a uniform approach by applying the correlation provided by the WCO.

2012 version	2007 version	Remarks in WCO's concordance table

## **5.5 Coding conventions**

5.9. The length of HS codes (six or more digits) used in the current CTS database will be maintained for this transposition exercise. For those tariff lines where the transposition was done automatically, the resulting tariff line codes could have fewer digits than unaffected CTS lines. In order to maintain a uniform tariff line coding, the HS codes of automatically transposed tariff lines will be padded with trailing zeros in order to yield the same code length as that of the tariff lines in the current schedule.

#### 5.6 Agriculture vs. non-agriculture breakdown

- 5.10. Like in the previous transposition exercise, the classification of Agricultural (AG) and non-Agricultural (non-AG) products will follow the distinction proposed by the Chairman of the NAMA negotiations in his latest draft modalities text<sup>19</sup>. This definition, which was presented in the HS 2002 nomenclature, will be transposed to HS 2007, and then to HS 2012 by applying the standard WCO correlation tables.
- 5.11. There are two cases where the HS 2007 transposition resulted in a mix of AG and non-AG products at the level of subheadings. These were: non-AG HS 2002 subheading 0509.00 (natural sponges of animal origin) was deleted because of its low volume of trade. This resulted in a transfer to a formerly AG only subheading 0511.99 (other products of animal origin) in HS 2007, which was the residual subheading of Chapter 05. The second case was the creation of a new heading 28.52 for separate inorganic or organic compounds of mercury that resulted in mercury compounds originally classified under 29 HS 2002 subheadings being transferred to this new HS 2007 subheading. Among the 29 HS 2002 subheadings involved, two of them (ex3502.90 and ex3504.00) were defined as agricultural products. HS 2007 subheading 0511.99 was treated as an agricultural product, while 2852.00 was classified as a non-agricultural product.
- 5.12. There is one case where the HS 2012 transposition results in a mix of Ag and non-Ag products at the subheading level. HS 2012 subheading 2852.90 (non-chemically defined organic or inorganic compounds of mercury, excluding amalgams) originates from 12 HS 2007 subheadings, three of which are AG subheadings (ex3501.90, ex3502.90 and ex3504.00). In the absence of a new definition in HS 2012, the Secretariat would propose to treat HS 2012 subheading 2852.90 as

<sup>&</sup>lt;sup>19</sup> TN/MA/W/103/Rev.3/Add.1, Annex 1, page 34.

a non-agricultural product considering that the agricultural component consist only of a minor part of the new subheadings, both in terms of importance of classification and volume of trade.

#### **6 FORMAT AND CONTENTS OF THE HS 2012 TRANSPOSITION FILES**

- 6.1. This section provides further technical information on the format and contents of the HS 2012 transposition files to be prepared by the Secretariat. It should also serve as a guideline to the format of the files that will be prepared by those Members that will submit their own transpositions. The format of the two key tables as well as reference information on WCO HS 2012 nomenclature and correlation tables was already made available to Members through the IDB File Exchange Facility<sup>20</sup>. The information is reproduced in Tables 6 and 7 below, together with some additional explanations.
- 6.2. The changes that result from the HS transposition are summarized in Tables 6 and 7. Table 6, called transposition file, contains all relevant elements of the schedule for all those HS headings where one or more tariff lines are affected by HS changes. Table 7, usually called the concordance or correlation table, provides the concordance of all tariff lines in the transposition file to one or more tariff lines in the schedule in the HS 2007 nomenclature. In its MS Access version, a query called "Concordance\_HS2007\_HS2012" is available in each file in order to extract the reverse concordance from HS 2007 to HS 2012. In MS Excel, an additional worksheet with the reverse concordance is provided. The electronic files maintained in the Consolidated Tariff Schedules (CTS) database in HS 2007 serve as the source of information for Members' commitments.
- 6.3. Additional tables transposing relevant concessions and commitments contained in other parts and sections of the Schedules should also be included as part of the draft HS 2012 files in case relevant HS codes are affected. For example, if tariff quotas or export subsidies are affected by HS 2012 changes, the Secretariat will prepare an Excel file which would include (1) the tariff lines affected by the HS 2012 changes and (2) the corresponding correlation table(s). The tables maintained in the Consolidated Tariff Schedules (CTS) database will be used by the Secretariat as the source of this information. The new tables will allow Members to determine the precise scope of each concession or commitment in the new version of the nomenclature. To facilitate the review process, an indication of which tariff lines are affected by the HS 2012 changes within each tariff quota or export subsidy will be included. The information described in this paragraph should also be provided in the draft HS 2012 files prepared by Members.
- 6.4. The scope of the tariff lines to be covered by this transposition exercise is given in the Annex of this document. Tariff lines are defined as all product items which can be identified by a product description and corresponding commitments. This also includes tariff lines that are not identified by a unique HS product code. In the format of the Secretariat tables, these tariff lines are identified by different tariff line suffixes. All tariff lines in the HS 2012 transposition table need to be linked via the concordance table with the HS 2007 version of the final concession table in the Consolidated Tariff Schedules database.
- 6.5. For the sake of transparency and facilitate the review process, it is also recommended to include the unbound parts of HS 2012 subheadings affected by the transposition in the correlation table and in the transposition file. This is necessary for those cases where product descriptions can only be understood in the context of a full listing of all product items within one subheading. For example, the product description "Other" can only be interpreted correctly if one knows all the items that are not covered by this residual category. Leaving out unbound items at the tariff line level, i.e. more detailed than HS subheadings, could result in the misinterpretation of product description of bound tariff lines.
- 6.6. The Secretariat introduced in the HS 2002 and HS 2007 transpositions all unbound tariff lines in the new final concession table (listing the full nomenclature), as well as in the transposition file and the correlation tables (in the HS2007 transposition). These files have been made available for the multilateral review exercises. The final concession table will be the basis for the HS 2007 version of the CTS, which is currently under preparation. For the HS 2012 transposition exercise the Secretariat will prepare (1) a correlation table, including correlations for unbound tariff lines, (2) a transposition file and (3) a new final HS 2012 concession table covering the full

<sup>&</sup>lt;sup>20</sup> https://idbfileexchange.wto.org.

nomenclature. However, in the document prepared for the purpose of certification the unbound tariff lines will not be shown.

**Table 6: Transposition file** 

FIELD NAME	DESCRIPTION
Member	Country code of the WTO Member (ISO Alpha Code).
TL	Tariff line number, headings or sub-headings.
TLLevel	Tariff line product level.
TLS	Tariff Line Suffix.
Ex	Ex recording concession on part of the product or Ex1, Ex2, etc. recording concessions at different duty levels.
Sector	Ag: Standard definition of agriculture used by the Secretariat; Ag-ex: Headers that include both agricultural and non-agricultural products; Null: Non-agricultural products.
Description	Product's description in English, French or Spanish with dashes essential.
Certified	C: Certified, A: Approved but not yet certified; or Null: Not certified.
Base Duty AV	Ad valorem duty only, examples: 30 for (30%) or 11.75 for (11.75%).
Base Duty Other	Specific duty or duty containing a specific rate element (currency and quantity unit included) – see examples under Base Duty Nature field below.
Base Duty Binding Status	B: Bound; U: Unbound.
Base Duty Nature	A: ad valorem=10%; M: mixed=10% or \$2/kg whichever is the higher (/lower); C: compound=10% + S2/kg; S: specific=\$2/kg; O: other textual duty.
Bound Duty AV	Ad valorem duty only, examples: 30 for (30%) or 11.75 for (11.75%).
Bound Duty Other	Specific duty or duty containing a specific rate element (currency and quantity unit included) – see examples under Bound Duty Nature field below.
Bound Duty Binding Status	B: Bound; U: Unbound.
Bound Duty Nature	A: ad valorem=10%; M: mixed=10% or \$2/kg whichever is the higher (/lower); C: compound=10% + S2/kg; S: specific=\$2/kg; O: other textual duty.
ODC Duty AV	Other duties and charges (ODC) ad valorem duty.
ODC Duty Other	Specific duty or duty containing a specific rate element (currency and quantity unit included) – see examples under ODC Duty Nature field below.
ODC Textual Information	Textual information related to ODCs.
ODC Duty Nature	A: ad valorem=10%; M: mixed=10% or \$2/kg whichever is the higher (/lower); C: compound=10% + S2/kg; S: specific=\$2/kg; O: other textual duty.
Special Safeguard	SSG (English); SGS (French); and SGE (Spanish)
Present Instrument	Legal instrument on the present concession, e.g. UR/94 for the Uruguay Round
Present INR Text	Initial negotiating rights on the present concession (2 or 3 alpha ISO or other codes, separated by a hyphen).
First Instrument	Legal instrument establishing the first concession, e.g. G/47, etc.
Earlier INR Text	Initial negotiating rights on earlier concession(s) and, if available, the duty level and reference on historic INRs. E.g. CH 10 T/51-EEC6 20-US (2 or 3 alpha ISO or other codes, separated by a hyphen or comma).
Implementation From	Implementation period: Start year.
Implementation To	Implementation period: End year.

**Table 7: Concordance table** 

FIELD NAME	DESCRIPTION
Reporter	Country code of the WTO Member (ISO Alpha Code).
Ex_HS12	'Ex' signifies that only part of the HS code (TL_HS12) is covered by this correlation.
TL_HS12	Tariff line number in HS2012
TLS_HS12	Tariff Line Suffix in HS2012
Rate_HS12	Ad valorem bound duty rate of tariff lines in the HS2012
OtherRate_HS12	Other bound duty rate of tariff lines in the HS2012
Ex_HS07	'Ex' signifies that only part of the HS code (TL_HS07) is covered by this correlation.
TL_HS07	Tariff line number in HS2007
TLS_HS07	Tariff Line Suffix in HS2007

FIELD NAME	DESCRIPTION
Rate_HS07	Ad valorem bound duty rate of tariff lines in HS2007
OtherRate_HS07	Other bound duty rate of tariff lines in HS2007

#### 7 VERIFICATION OF MEMBERS' SUBMISSIONS

7.1. Paragraph 9 of the HS 2012 Decision mandates the Secretariat to review the draft HS 2012 files prepared by Members before releasing them for multilateral review. In this respect, the Secretariat will prepare a verification report which will be released together with the draft HS 2012 file prepared by the Member. To this end, the Secretariat will follow a standard procedure that can be applied objectively and transparently to all submissions. It can be summarized as follows:

#### 7.1 Processing and formatting

7.2. Submissions received in formats that differ from the suggested standard format in the reference information<sup>21</sup> will be processed in the standard format and converted to a database. The Secretariat will apply the concordance table submitted to extract data from the CTS (HS 2007) and list the commitments against the transposition file. In this process, the issues identified by the Secretariat will be documented in a report that will be sent to the Member concerned with a description of the problems and suggestions for correction.

#### 7.2 Consistency of submissions

- 7.3. Consistency checks will be performed to verify the correctness and completeness of the submission itself, as well as in relation to the original HS 2007 schedule, as reflected in the CTS. The following five aspects will be verified:
- (a) As the concordance table for Members preparing their own file will not include duties, no verification of duties will be made in this table. If members provide this information, it will not be used by the Secretariat to prepare the standard draft HS 2012 transposition file. The Secretariat will generate the HS 2007 duties from the CTS file and the HS 2012 duties from the Member's submission;
- (b) All HS 2012 tariff line codes in the correlation table should match with tariff line codes in the draft HS 2012 schedule of the submission. Any mismatches will be identified and noted;
- (c) All HS 2007 tariff line codes in the correlation table should match with tariff line codes in HS 2007 CTS files. Any mismatches will be identified and noted;
- (d) If the draft HS 2012 file of a submission includes a complete nomenclature, then the tariff lines that are not affected by the HS 2012 changes should be the same as they are in HS 2007. Any mismatches will be identified and noted;
- (e) All tariff lines codes listed in the HS 2012 submission should be in line with WCO standard 2012 version of the HS. Any mismatches will be identified and noted.

## 7.3 Compare submissions with the standard WCO's correlation table

7.4. The WCO's correlation table indicates that "they are not to be regarded as constituting classification decisions taken by that Committee; they constitute a guide published by the Secretariat and whose sole purpose is to facilitate implementation of the 2012 version of the Harmonized System. They do not have legal status." Therefore, it is possible that WTO Members deviate in one way or another from that correlation table in the transposition of their schedule of concessions. However, since the WCO correlation is the only common basis for the transposition and will be used by the Secretariat to transpose the schedules of developing country Members, it seems appropriate to compare the other Members' submissions with the WCO standard correlation table and to identify any deviations.

<sup>&</sup>lt;sup>21</sup> The Secretariat will update the reference tables that had been previously issued to take account of the WCO's second corrigendum (July 2011) relating to HS 2012 subheadings 1001.99 and 3913.

- 7.5. Given the large workload that this could entail and the limited resources available, the Secretariat will not be in a position to analyse these submissions on a line-by-line basis. The Secretariat intends to use a standard procedure to exclusively identify the deviations that resulted in an omission of duties that are lower than the duty proposed in draft HS 2012 files, or which resulted in extra duties that are higher than the duties resulting from the transposition following the WCO correlation table.
- 7.6. The procedure will, firstly, conduct a theoretical transposition by applying the WCO correlation to the HS 2007 CTS database of the Member concerned. As described in the first step of the general methodology in Section II above, this will create a table that lists all HS 2012 subheadings, corresponding HS 2007 subheading and all national tariff lines under each HS 2007 subheading, which could potentially be reallocated under corresponding HS 2012 subheadings. Secondly, both the theoretical transposition and the submission will be grouped by HS six-digit codes and bound duties. The results are two lists of unique duties for each HS six-digit subheading. Then a comparison will be done between the two lists to see if the unique duties under each subheading can be matched. The comparison has three possible results:
- (a) Under the same HS 2012 subheading, the duties of the submission are exactly the same as the duties of the theoretical transposition. For example, under a subheading, the theoretical transposition has duties of 10 per cent and 20 per cent and the submission for the same subheading has duties 10 per cent and 20 per cent as well. In this case, although the national correlation could deviate from the WCO's correlation table, the Secretariat will do no further checking because the levels of concessions are most likely the same as they were in HS 2007;
- (b) Under the same HS 2012 subheading, the submission has extra unique duties. If the extra duties are lower than the lowest duties of the theoretical transposition, they will not be noted by the Secretariat. For example, for a particular HS 2012 subheading the theoretical transposition by the Secretariat shows 2 duties, 10 per cent and 20 per cent, but the Member's submission shows three duties, 5 per cent, 10 per cent and 20 per cent. In the alternative case where the extra duties in the Member's submission are higher than the highest duties of the theoretical transposition, the tariff lines under the subheading will be listed in the verification report. For instance, the extra duty is 25 per cent instead of 5 per cent.
- Under the same HS 2012 subheading, the submission by the Member misses some unique (c) duties, which are in the theoretical transposition by the Secretariat. The theoretical transposition links all national tariff lines under the relevant HS 2007 subheadings (candidate lines) to each HS 2012 subheading. In some cases such as a HS 2007 subheading is split into several HS 2012 subheadings, not all candidates should necessarily be kept in certain HS 2012 subheadings; a candidate line can be transferred to different HS 2012 subheadings and it should be deleted as a candidate for the current HS 2012 subheading as long as other national tariff lines under the same HS 2007 subheading are kept for this HS 2012 subheading<sup>22</sup>. To determine whether a candidate tariff line should be kept or deleted requires checking the product description manually, as the Secretariat does in manual transpositions. The proposed verification would take a relatively simple approach: a missing unique duty will not be identified as a problem as long as other tariff lines under the same HS 2007 subheading are kept for this HS 2012 subheading. Based on this assumption, a further check will be done to determine whether a whole HS 2007 subheading is missing for this HS 2012 subheading. If it is the case, these will be listed as problems since the missing duties must be the result of a missing correlation. If it is not the case, then the theoretical transposition includes all national tariff lines under this HS 2007 subheading and the submission select only some of them; the missing duties are being reallocated to other subheadings.
- 7.7. If the submissions include other concession elements, such as INRs, they will also be taken into account in the above-mentioned process. It should be stressed that this comparison by the Secretariat is not meant to replace the manual checking by other Members interested in specific products. The automatic procedure is based on a number of assumptions which may not always correspond to the result of a more in-depth analysis.

<sup>&</sup>lt;sup>22</sup> See for example case 1.c in Section II.

7.8. The problems found by the Secretariat in applying this procedure will be presented in an Excel verification report, which will include three parts corresponding to the three steps: problems found in processing, inconsistencies, and deviations related to changes of concessions. For each problem identified, the tariff line codes and an explanation will be provided for ease of reference and review.

# ANNEX HS 2012 TO HS 2007 CORRELATIONS<sup>1</sup>

Column "Type" flags cases where the transposition from HS 2007 to HS 2012 can be carried out by an automatic program. The different values are:

- R: Renumbering (see Case 2 in section II)
- A: Automatic (see Case 3)
- L: low trade (see simplified correlations (a) in Section V)
- M: use of mode (see simplifying selected complex changes in Section V, e.g. Simplification b.1a in Section V)
- Mb: considered as unaffected by change in HS version (the product scope is reduced by a fraction, see Simplification b. 1b in Section V)
