4.	<p>In note 1 to this chapter and in heading 4002, the expression "synthetic rubber" applies to:</p> <p>(a) Unsaturated synthetic substances which can be irreversibly transformed by vulcanization with sulfur into nonthermoplastic substances which, at a temperature between 18°C and 20°C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length. For the purposes of this test, substances necessary for the cross-linking, such as vulcanizing activators or accelerators, may be added; the presence of substances as provided for by note 5(b)(ii) and (iii) is also permitted. However, the presence of any substances not necessary for the cross-linking, such as extenders, plasticizers and fillers, is not permitted;</p> <p>(b) Thioplasts (TM); and</p> <p>(c) Natural rubber modified by grafting or mixing with plastics, depolymerized natural rubber, mixtures of unsaturated synthetic substances with saturated synthetic high polymers provided that all the above-mentioned products comply with the requirements concerning vulcanization, elongation, and recovery in (a) above.</p>					
5.	<p>(a) Headings 6001 and 6002 do not apply to any rubber or mixture of rubbers which has been compounded, before or after coagulation, with:</p> <p>(i) vulcanizing agents, accelerators, retarders or activators (other than those added for the preparation of pre-vulcanized rubber latex);</p>

For the purposes of subheadings 5209.42 and 5211.42, the expression "blue denim" means fabrics of 3-thread or 4-thread twill, including broken twill, warp faced, the warp yarns of which are dyed blue and the weft yarns of which are unbleached, bleached, dyed grey or colored a lighter shade of blue than that of the warp yarns.</p> <p><u>Additional U.S. Notes</u></p> <p>1. Under regulations prescribed by the Secretary of the Treasury, the staple length of cotton shall be determined for all customs purposes by application of the Official Cotton Standards of the United States for length of staple, as established by the Secretary of Agriculture and in effect when the determination is to be made.</p> <p>2. For the purposes of classifying yarns of headings 5205 and 5206 the term "mm", as applied in these headings, means the number of 1,000-meter lengths of yarn in one kilogram. To determine the mm measurement of any yarn, whether single, multiple (folded) or cabled, the actual meters per kilogram shall be divided by 1,000 and the quotient thereof multiplied by the number of single yarns therein, including the single yarns used in manufacturing multiple (folded) or cabled yarns.</p> <p>3. 	<p>(a) The term "number", as applied to woven fabrics of cotton, means the average yarn number of the yarns contained therein. In computing the average yarn number, the length of the yarn is considered to be equal to the distance covered by it in the fabric in the condition as imported, with all clipped yarn being measured as if continuous and with the count being taken of the total single yarns in the fabric including the single yarns in any multiple (folded) or cabled yarns. The weight shall be taken after any excessive sizing is removed by boiling or other suitable process. Any one of the following formulas can be used to determine the average yarn number for tariff purposes--</p> $M = \frac{BYT}{1,000} \cdot \frac{100Y}{Z'} \cdot \frac{BT}{Z} \cdot \text{or} \cdot \frac{ST}{10}$ <p>when:</p> <ul style="list-style-type: none"> <li>M is the average yarn number,</li> <li>B is the breadth (width) of the fabric in centimeters,</li> <li>Y is the meters (linear) of the fabric per kilogram,</li> <li>T is the total single yarns per square centimeter,</li> <li>S is the square meters of fabric per kilogram,</li> <li>Z is the grams per linear meter of fabric, and</li> <li>Z' is the grams per square meter of fabric.</li> </ul> <p>Fractions in the resulting "number" shall be disregarded.</p>

	<p><u>Additional U.S. Notes</u></p> <p>1. For the purposes of this chapter, a "ceramic article" is a shaped article having a glazed or unglazed body of crystalline or substantially crystalline structure, the body of which is composed essentially of inorganic nonmetallic substances and is formed and subsequently hardened by such heat treatment that the body, if reheated to pyrometric cone 020, would not become more dense, harder, or less porous, but does not include any glass articles.</p> <p>2. For the purposes of headings 6902 and 6903, the term "refractory" is applied to articles which have a pyrometric cone equivalent of at least 1500°C when heated at 60°C per hour (pyrometric cone 18). Refractory articles have special properties of strength and resistance to thermal shock and may also have, depending upon the particular uses for which designed, other special properties such as resistance to abrasion and corrosion.</p> <p>3. For the purposes of heading 6902, a brick which contains both chromium and magnesium is classifiable according to which of those components (expressed as Cr<sub>2</sub>O<sub>3</sub> or MgO, respectively) is the greater by weight.</p> <p>4. For the purposes of headings 6905, 6907 and 6908, the term "tiles" does not include any article 3.2 cm or more in thickness.</p> <p>5. For the purposes of headings 6909 through 6914: (a) The terms "porcelain", "china" and "chinaware" embrace ceramic ware (other than stoneware), whether or not glazed or decorated, having a fired white body (unless artificially colored) which will not absorb more than 0.5 percent of its weight of water and is translucent in thicknesses of several millimeters. 	<p>(c) The expression "absorbent or reflecting layer" means a microscopically thin coating of metal or of a chemical compound (for example, metal oxide) which absorbs, for example, infrared light or improves the reflecting qualities of the glass while still allowing it to retain a degree of transparency or translucency.</p> <p>3. The products referred to in heading 7006 remain classified in that heading whether or not they have the character of articles.</p> <p>4. For the purposes of heading 7019, the expression "glass wool" means:</p> <p>(a) Mineral wools with a silica (SiO<sub>2</sub>) content not less than 60 percent by weight;</p> <p>(b) Mineral wools with a silica (SiO<sub>2</sub>) content less than 60 percent but with an alkaline oxide (K<sub>2</sub>O or Na<sub>2</sub>O) content exceeding 5 percent by weight or a boric oxide (B<sub>2</sub>O<sub>3</sub>) content exceeding 2 percent by weight.</p> <p>Mineral wools which do not comply with the above specifications fall in heading 6806.</p> <p>5. Throughout this schedule, the expression "glass" includes fused quartz and other fused silica.</p> <p><u>Subheading Note</u></p> <p>1. For the purposes of subheadings 7013.21, 7013.31 and 7013.91, the expression "lead crystal" means only glass having a minimum lead monoxide (PbO) content by weight of 24 percent.</p>

	<p><u>Additional U.S. Notes 1/</u></p> <p>1. For the purposes of this chapter, the term "fused quartz or other fused silica" means glass containing more than 95 percent silica by weight.</p> <p>2. For the purposes of headings 7003 through 7005, the expression "colored throughout the mass" refers to glass that has a transmittance of normally incident light of less than 66 percent at one or more wavelengths from 400 to 700 millimicrons, inclusive, or a transmittance of less than 80 percent at one or more wavelengths from 525 to 575 millimicrons, inclusive, for glass 6 mm in thickness, or of the equivalent transmittances for any other thickness, provided that, in determining such light transmittances, the effect of surface irregularities or configurations, or of other surface treatment (except flashing applied prior to solidification), and the effect of wire netting within the glass, shall be eliminated.</p> <p>3. For the purposes of heading 7005, the expression "polished", as used with reference to glass, refers to glass one or both of the surfaces of which have been made smooth and glossy, in whole or in part, by abrasive or chemical means, or by floating the glass over molten metal.</p> <p>4. For the purposes of subheading 7018.10.20, the term "imitation precious or semiprecious stones" means glass made into shapes suitable for use in jewelry or for other ornamental purposes in a manner similar to natural gemstones, whether or not in imitation thereof, but does not include natural gemstones, synthetic gemstones, reconstructed natural gemstones or imitation pearls.</p>

	<p>Headings 7606 and 7607 apply, <u>inter alia</u>, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, checkers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.</p> <p>(e) <u>Tubes and pipes</u> Hollow products, coiled or not, which have a uniform cross section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.</p>

	<p>CHAPTER 80 TIM AND ARTICLES THEREOF</p> <p><u>Note</u></p> <p>1. In this chapter the following expressions have the meanings hereby assigned to them: (a) <u>Bars and rods</u> Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including "flattened circles" and "modified rectangles", of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross section may have corners rounded along their whole length. The thickness of such products which have a rectangular (including "modified rectangular") cross section exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or descaling), provided that they have not thereby assumed the character of articles or products of other headings.</p> <p>(b) <u>Profiles</u> Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms,</p>

For the purposes of heading 8534 "<u>printed circuits</u>" are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).</p> <p>The term "<u>printed circuits</u>" does not cover circuits combined with elements other than those obtained during the printing process. Printed circuits may, however, be fitted with nonprinted connecting elements.</p> <p>Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading 8542.</p> <p>5. For the purposes of headings 8541 and 8542: (a) "<u>diodes, transistors and similar semiconductor devices</u>" are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field;</p>

For the purposes of this chapter, the expression "<u>watch movements</u>" means devices regulated by a balance wheel and hairspring, quartz crystal or any other system capable of determining intervals of time, with a display or a system to which a mechanical display can be incorporated. Such watch movements shall not exceed 12 mm in thickness and 50 mm in width, length or diameter.</p> <p>4. Except as provided in note 1, movements and other parts suitable for use both in clocks or watches and in other articles (for example, precision instruments) are to be classified in this chapter.</p> <p><u>Additional U.S. Notes 1/</u></p> <p>1. For the purposes of this chapter:</p> <p>(a) The term "<u>watches</u>" embraces timepieces (including timepieces having special features, such as chronographs, calendar watches and watches designed for use in skin diving) of a kind for wearing or carrying on the person whether or not the movement contained therein conforms to the definition of "<u>watch movements</u>" in note 3, above. Timepieces incorporating a stand, however simple, are not classifiable as watches.</p> <p>(b) The term "<u>cases</u>" embraces inner and outer cases, containers and housings for movements, together with parts or pieces, such as, but not limited to, rings, feet, posts, bases and outer frames, and any auxiliary or incidental features, which (with appropriate movements) serve to complete the watches, clocks, time switches and other apparatus provided for in this chapter.</p> <p>(c) The term "<u>jewels</u>" includes substitutes for jewels.</p>	3	4	5	6	7
